

# Federated Total Return Bond Fund

Nasdaq Symbol — R6: FTRLX | IS: FTRBX | SS: FTRFX | A: TLRAX | B: TLRBX | C: TLRCX | R: FTRKX

## Product Highlights

- Pursues total return.
- Invests in a broad, strategic mix of bond sectors: primarily U.S. government and investment-grade corporate; also high-yield and emerging markets (including trade finance); high yield allocation limited to 25%.
- Focuses on sectors management believes will benefit from anticipated changes in economic and market conditions.
- Serves as a core multisector bond holding.

Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit [FederatedInvestors.com](http://FederatedInvestors.com). Maximum Offering Price figures reflect the maximum sales charge of 4.5% for A Shares, and the maximum contingent deferred sales charges of 5.5% for B Shares and 1% for C Shares. See the prospectus for other fees and expenses that apply to a continued investment in the fund.

\* The fund's expense ratio is from the most recent prospectus. The expense ratio may reflect voluntary fee waivers and/or expense reimbursements determined by the fund's Advisor and its affiliates. The voluntary waivers and/or reimbursements, if applicable, are in effect up to but not including the later of 2/1/20 or the date of the fund's next effective prospectus.

# Federated Total Return Bond Fund

## Growth Over Time

If you had invested \$10,000 in A Shares on 8/31/01 (month end of the fund's performance inception) and reinvested all distributions, here's how your account would have grown by 12/31/19.

The fund's R Shares commenced operations on April 7, 2003. For the period prior to the commencement of operations of the R Shares, the performance information shown is for the fund's Institutional Shares, adjusted to reflect the expenses of the R Shares. See the prospectus for other fees and expenses that apply to a continued investment in the fund.

The fund's R6 Shares commenced operations on April 22, 2015. For the period prior to the commencement of operations of the R6 Shares, the performance information shown is for the fund's Institutional Shares, adjusted to reflect the expenses of the R6 Shares for each year for which the expenses of the R6 Shares would have exceeded the actual expenses paid by the Institutional Shares.

The B Shares of this Federated fund are closed to new investors and new investments from existing shareholders (excluding reinvestment of dividends and capital gains and exchanges from B Shares of other Federated Funds).

## A Word About Risk

Mutual funds are subject to risks and fluctuate in value. High-yield, lower-rated securities generally entail greater market, credit/default and liquidity risks, and may be more volatile than investment-grade securities.

Bond prices are sensitive to changes in interest rates, and a rise in interest rates can cause a decline in their prices.

The value of some mortgage-backed securities may be particularly sensitive to changes in prevailing interest rates, and although the securities are generally supported by some form of government or private insurance, there is no assurance that private guarantors or insurers will meet their obligations.

International investing involves special risks including currency risk, increased volatility, political risks, and differences in auditing and other financial standards. Prices of emerging market and frontier market securities can be significantly more volatile than the prices of securities in developed countries, and currency risk and political risks are accentuated in emerging markets.

## Definitions

The holdings percentages are based on net assets at the close of business on 12/31/19 and may not necessarily reflect adjustments that are routinely made when presenting net assets for formal financial statement purposes. Because this is a managed portfolio, the investment mix will change.

Total return represents the change in value of an investment after reinvesting all income and capital gains. Total return would have been lower in the absence of temporary expense waivers or reimbursements.

30-day yield (also known as "SEC yield") is a compounded and annualized figure calculated according to a formula set by the SEC. The formula requires use of a specific methodology for calculating dividends and interest earned, and expenses accrued, during the period, and reflects the maximum offering price per fund share. The standardized computation is designed to facilitate yield comparisons among different funds. In the absence of temporary expense waivers or reimbursements, the 30-day yield would have been 2.93% for R6 Shares, 2.88% for Institutional Shares, 2.39% for Service Shares, 2.25% for A Shares, 1.81% for B Shares, 1.87% for C Shares, and 2.18% for R Shares.

Growth Over Time performance is for the fund's A Shares. Figures do not reflect the 4.5% maximum sales charge. The fund offers additional share classes whose performance will vary due to differences in charges and expenses.

Weighted Average Effective Maturity is the average time to maturity of debt securities held in the fund.

Weighted Average Effective Duration (sometimes called "Option-Adjusted Duration") is a measure of a security's price sensitivity to changes in interest rates calculated using a model that recognizes that the probability of a bond being called or remaining outstanding until maturity may vary if market interest rates change, and that makes adjustments based on a bond's embedded options (e.g., call rights, or in the case of a mortgage-backed security, the probability that homeowners will prepay their mortgages), if any, based on the probability that the options will be exercised. A fund's weighted average effective duration will equal the market value weighted average of each bond's effective duration in the fund's portfolio. As with any model, several assumptions are made so the weighted average effective duration of a fund in the Federated family of funds may not be comparable to other funds outside of the Federated family of funds. Securities with longer durations are more sensitive to changes in interest rates than securities of shorter durations.

*Investors should carefully consider the fund's investment objectives, risks, charges and expenses before investing. To obtain a summary prospectus or prospectus containing this and other information, contact us or visit [FederatedInvestors.com](http://FederatedInvestors.com). Please carefully read the summary prospectus or the prospectus before investing.*

*Past performance is no guarantee of future results.*

Weighted Average Bond Price - Morningstar generates this figure from the portfolio by weighting the price of each bond by its relative size in the portfolio. This number reveals if the manager favors bonds selling at prices above or below face value (discount or premium securities, respectively). A higher number indicates a bias toward premiums. This statistic is expressed as a percentage of par (face) value.

Bloomberg Barclays U.S. Aggregate Bond Index is an unmanaged index composed of securities from the Bloomberg Barclays Government/Corporate Bond Index, Mortgage-Backed Securities Index and the Asset-Backed Securities Index. Total return comprises price appreciation/depreciation and income as a percentage of the original investment. Indices are rebalanced monthly by market capitalization.

Indexes are unmanaged and cannot be invested in directly.

## Ratings and Rating Agencies

Morningstar Category identifies funds based on their actual investment styles as measured by their underlying portfolio holdings over the past three years. If the fund is less than three years old, the category is based on the life of the fund. ©2020 Morningstar, Inc. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results.

\*\* The ratings agencies that provided the ratings are Standard and Poor's, Moody's and Fitch. When ratings vary, the highest rating is used. Credit ratings of A or better are considered to be high credit quality; credit ratings of BBB are good credit quality and the lowest category of investment grade; credit ratings BB and below are lower-rated securities ("junk bonds"); and credit ratings of CCC or below have high default risk. The credit quality breakdown does not give effect to the impact of any credit derivative investments made by the fund.
